**AGRITECHNICA 2011  
PRESS RELEASE**

**Folding combination seed drills with rear hopper  
VENTA NCR 4500 - 5000**

The folding combination seed drills VENTA NCR 4500 - 5000 were developed to meet the demand for high output using both tilling and minimum tillage techniques.

With the 1600 litre capacity rear hopper, the front tractor linkage can be used to perfect soil preparation.

Once folded, the combination has a transport width of 2.85 m for totally safe circulation by road.

The seedbed is prepared by a folding power harrow in the 1004 range, with 250 hp permissible power.

The SEEDFLEX® coulter bar, equipped with double discs offset on the parallelogram, and large-diameter press wheels, achieves ground pressure up to 45 kg per unit, thus ensuring uniform seeding depth, even at high seeding speeds.

Incorporating the seeding units in the roller frame simplifies adjustment and ensures perfect ground hugging.

The QUANTRON S box coupled to an electric cell wheel drive provides full seeding control. This equipment provides the possibility of modulating the application rate, anticipating cell wheel rotation, recording 200 fields in memory, including the variety seeded, application rate, date of seeding, number of hours, etc.

VENTA NCR: an impressive output rate, accurate seeding and transport in total safety!
