**PRESS RELEASE
AGRITECHNICA 2011**

DOMINATOR[®] Combination Primary Tillage

The industry-leading KUHN DOMINATOR[®] Combination Primary Tillage machine is being introduced to key European markets for the first time at AGRITECHNICA exhibition, 15-19 November, 2011. This unique machine has proven itself in a variety of field conditions, working with various crops and has satisfied customers throughout North America.

The KUHN DOMINATOR was designed specifically to perform in today's tough residue and high yielding corn and other crop environments. It's innovative patented design is based on customer research and plant agronomic requirements.

Its multi function design manages residue, soil tilth and after-harvest seed bed conditions in a series of agronomic processes arranged in a logical sequence. The results far surpass the output of other designs which require additional residue sizing or seed bed preparation trips.

The DOMINATOR cuts and sizes residue more effectively than current tillage tools. A coulter gang, equipped with a live-hydraulic down pressure system and large 25" (635mm) diameter coulters are spaced every 9" (229mm) and indexed to the shanks. An optional innovative Residue Manager system positions stalks laterally, ahead of the coulters for an even higher percentage of residue sizing.

The DOMINATOR outperforms current machines by providing more uniform soil tilth with two rows of shanks, in a "Split-the-Middle" pattern for an effective 18" (457mm) spacing and up to 16" (40cm) working depth. This design provides more uniform soil fracture than competitive models with 24" (610mm) and 30" (762mm) spacing.

Another distinctive component is the Disc Conditioner System that features one row of 24" (610mm) smooth disc blades and a second row of fluted blades to further reduce clod size and level the soil surface.

To finish off this operation, the 24/7[®] Soil Conditioner Reel provides additional clod sizing and soil firming, eliminating the extra expense and inconvenience of a "pull-behind" soil conditioner.

The DOMINATOR is available in four sizes from 10' 6" (3.2m) to 19'6" (5.9m) working width to meet tractor requirements of 250 to 550 horsepower.

Visit us Hall 12 booth C04 at AGRITECHNICA 2011 and experience why so many farmers around the world have chosen the KUHN DOMINATOR to accomplish their agronomic goals – Fall and Spring.

KUHN Krause, Inc., of Hutchinson, Kansas, is a recognized leader in the development and manufacturing of high-quality, innovative tillage and grain drill equipment.
